

NEW

The WWT FlexShoe™*

The *new* WWT FlexShoe™* minimizes the risks encountered during casing installation in ERD and high-angle wells **by guiding casing past planned and unplanned wellbore profiles such as severe doglegs and ledges.**

- ✓ Strong, drillable, flexible composite body approximately 5% of the stiffness of steel casing.
- ✓ Permits cementing through the tool.
- ✓ Unique coupling design allows transition from the rigid casing to the WWT FLX while keeping stresses low.
- ✓ Compatible with various connections, floats and other casing running equipment.

**Reduce nonproductive time on your next challenging well.
